

LINETRAXX® CTAC series

Measuring current transformers

measuring current transformers CTAC series

Device features

Measuring current transformers CTAC...

- For RCMS460/490 residual current monitoring systems
- For RCM420 residual current monitors
- For EDS440 and EDS460/490 insulation fault locators in AC and DC systems

Measuring current transformers CTAC.../01

- For EDS441 and EDS461/EDS491 insulation fault locators

Approvals and certifications

Product description

The highly sensitive CTAC series measuring current transformers in combination with RCM or RCMS series residual current monitors and evaluators convert AC currents into an evaluable measurement signal.

They are also suitable for use in insulation fault location systems for IT systems (EDS). The current transformers measure the locating current generated by a PGH locating current injector or an ISOMETER® iso685. In combination with EDS series insulation fault locators, the locating current is converted into an evaluable measurement signal.

The connection to the respective devices is made via a two-wire cable.

Installation instructions

- Do not route any shielded cables through the measuring current transformer.
- If the installation instructions are not followed, the tolerances and normative requirements of the connected monitoring devices may not be fulfilled.

Never route an existing protective conductor through the measuring current transformer.		The primary conductors may only be bent from the specified minimum distance. The minimum bending radius specified by the manufacturers must be observed. * Distance to 90° angle: 2x external diameter of the current transformer	
All current-carrying cables must be routed together through the measuring current transformer.		The cables must be centred in the measuring current transformer.	
		Internal diameter of the measuring current transformer $d2 \geq 2 \times d1$ (cable diameter)
